

```

int main {
    int 1a, b, c;
    cin >> a >> b >> c;

    int max_num, min_num;

    max_num = a;
    min_num = a;

    if (b > max_num) {
        max_num = b;
    } else if (b < min_num) {
        min_num = b;
    }

    if (c > max_num) {
        max_num = c;
    } else if (c < min_num) {
        min_num = c;
    }

    cout << "Maximum: " << max_num << "Minimum: " << min_num;

    return 0;

```

- 1- naming of first variable, must not start with digit
- 2- missing '}' at the end of main function
